Quickseal Specialist Contractors have recently completed more than 4000 square metres of basement waterproofing using the Sika 1 Tanking System from **NCC**. This is for the well known Buddleia Project in Liverpool.

NCC provided technical assistance and supplied all of the prebagged Sika 1 material, plus all of the associated SikaDur Combiflex jointing system for the £186,000 specialist contract carried out for main contractor, Mansell.

Mansell's selected the winning team of Quickseal and **NCC** on the basis of their previous good experience on other specialist waterproofing contracts, their competitive rates and their combined technical support.

NCC were also able to assist Mansell with the upgraded fire protection requirements on the project. They advised and supplied the project with Envirograph Passive Fire Protection systems.

The Buddleia Project is currently refurbishing Grade II Listed Victorian Warehouses. This is to provide a focal point with employment and cultural infrastructure, for Liverpool's black and minority ethnic communities, as part of an overall development by the Novas Group.
